

Wilderness Medical Associates

Student Skills Checklist

WAFA 2017

Student Name _____ Course: _____ Dates: _____
 Sponsor: _____ Instructors: _____

WAFA SKILLS:

<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="text-align: center;">PAS/BLS</th> <td></td> </tr> <tr> <th style="text-align: center;">SCENE</th> <td></td> </tr> <tr> <td>Recognize and safely manage scene dangers, including personal protective equipment</td> <td></td> </tr> <tr> <td>Establish # of patients</td> <td></td> </tr> <tr> <td>Determine MOI</td> <td></td> </tr> <tr> <th style="text-align: center;">PRIMARY ASSESSMENT</th> <td></td> </tr> <tr> <td>Rapidly assess Critical Systems Status (Circulatory, Respiratory, Neurologic)</td> <td></td> </tr> <tr> <th style="text-align: center;">BASIC LIFE SUPPORT</th> <td></td> </tr> <tr> <td>Demonstrates ability to assess the Critical Systems and determine need for interventions</td> <td></td> </tr> <tr> <td>Demonstrates rapid repositioning of patients with Critical Systems problems and potential spine injury</td> <td></td> </tr> <tr> <td>Demonstrates proficiency in CPR & FBAO to ILCOR standards</td> <td></td> </tr> <tr> <td>Demonstrate proficiency in PPV technique</td> <td></td> </tr> <tr> <td>Demonstrate proficiency in AED use</td> <td></td> </tr> <tr> <th style="text-align: center;">SECONDARY ASSESSMENT</th> <td></td> </tr> <tr> <td>Accurately completes physical exam for traumatic and non-traumatic patient</td> <td></td> </tr> <tr> <td>Demonstrate collection and recording of Vital Signs (P, R, S, C, T)</td> <td></td> </tr> <tr> <td>SAMPLE History</td> <td></td> </tr> <tr> <th style="text-align: center;">TREATMENT & SOAP FORMATTING</th> <td></td> </tr> <tr> <td>Create an appropriate problem list</td> <td></td> </tr> <tr> <td>Create an appropriate anticipated problem list</td> <td></td> </tr> <tr> <td>Create an appropriate treatment plan</td> <td></td> </tr> <tr> <td>Fill out a SOAP note</td> <td></td> </tr> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="text-align: center;">SPINE ASSESSMENT & Tx</th> <td></td> </tr> <tr> <th style="text-align: center;">ASSESSMENT</th> <td></td> </tr> <tr> <td>Verify MOI and consent if possible</td> <td></td> </tr> <tr> <td>Demonstrate ability to roll patient in a spine stable manner for assessment purposes</td> <td></td> </tr> <tr> <td>Demonstrate Spine Assessment Guidelines by evaluating:</td> <td></td> </tr> <tr> <td style="padding-left: 20px;">- Patient's Mental status and reliability</td> <td></td> </tr> <tr> <td style="padding-left: 20px;">- Any New Symptoms (column or cord)</td> <td></td> </tr> <tr> <td style="padding-left: 20px;">- Spine Pain and/or tenderness (column)</td> <td></td> </tr> <tr> <td style="padding-left: 20px;">- Motor/sensory exam (cord)</td> <td></td> </tr> <tr> <td>Document findings and describe appropriate management based on findings.</td> <td></td> </tr> <tr> <th style="text-align: center;">EXTRICATION/IMMOBILIZATION</th> <td></td> </tr> <tr> <td>Participate as a team member and lead a rescue team to properly move and package a potentially spine injured patient from various body positions</td> <td></td> </tr> </table>	PAS/BLS		SCENE		Recognize and safely manage scene dangers, including personal protective equipment		Establish # of patients		Determine MOI		PRIMARY ASSESSMENT		Rapidly assess Critical Systems Status (Circulatory, Respiratory, Neurologic)		BASIC LIFE SUPPORT		Demonstrates ability to assess the Critical Systems and determine need for interventions		Demonstrates rapid repositioning of patients with Critical Systems problems and potential spine injury		Demonstrates proficiency in CPR & FBAO to ILCOR standards		Demonstrate proficiency in PPV technique		Demonstrate proficiency in AED use		SECONDARY ASSESSMENT		Accurately completes physical exam for traumatic and non-traumatic patient		Demonstrate collection and recording of Vital Signs (P, R, S, C, T)		SAMPLE History		TREATMENT & SOAP FORMATTING		Create an appropriate problem list		Create an appropriate anticipated problem list		Create an appropriate treatment plan		Fill out a SOAP note		SPINE ASSESSMENT & Tx		ASSESSMENT		Verify MOI and consent if possible		Demonstrate ability to roll patient in a spine stable manner for assessment purposes		Demonstrate Spine Assessment Guidelines by evaluating:		- Patient's Mental status and reliability		- Any New Symptoms (column or cord)		- Spine Pain and/or tenderness (column)		- Motor/sensory exam (cord)		Document findings and describe appropriate management based on findings.		EXTRICATION/IMMOBILIZATION		Participate as a team member and lead a rescue team to properly move and package a potentially spine injured patient from various body positions		<table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="text-align: center;">MUSCULOSKLETAL SYSTEM</th> <td></td> </tr> <tr> <th style="text-align: center;">STABLE INJURIES</th> <td></td> </tr> <tr> <td>Assess distal CSM before beginning Treatment</td> <td></td> </tr> <tr> <td>Assess musculoskeletal injury and correctly identify stable injuries</td> <td></td> </tr> <tr> <td>Appropriately and effectively treat stable injuries</td> <td></td> </tr> <tr> <td>Re-assess distal CSM upon completion of treatment</td> <td></td> </tr> <tr> <th style="text-align: center;">UNSTABLE INJURIES</th> <td></td> </tr> <tr> <td>Assess distal CSM before beginning treatment</td> <td></td> </tr> <tr> <td>Assess musculoskeletal injury and correctly identify unstable injuries</td> <td></td> </tr> <tr> <td>Appropriately and effectively treat unstable extremity injuries</td> <td></td> </tr> <tr> <td style="padding-left: 20px;">- Splint upper and lower limbs</td> <td></td> </tr> <tr> <td>Re-assess distal CSM upon completion of treatment</td> <td></td> </tr> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="text-align: center;">WILDERNESS RESCUE</th> <td></td> </tr> <tr> <th style="text-align: center;">PATIENT AND LITTLER CARRIES</th> <td></td> </tr> <tr> <td>Demonstrate ability to create a 'piggy back' carry system using webbing, rope or other materials</td> <td></td> </tr> <tr> <th style="text-align: center;">HYPOTHERMIA WRAP</th> <td></td> </tr> <tr> <td>Demonstrate ability to build a hypothermia wrap</td> <td></td> </tr> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="text-align: center;">WOUNDS AND BURNS</th> <td></td> </tr> <tr> <td>Use BSI technique, shows ability to expose bleeding area and apply well-aimed direct pressure</td> <td></td> </tr> <tr> <td>Demonstrates ability to create a pressure bandage and tourniquet</td> <td></td> </tr> <tr> <td>Participate in a wound cleaning lab</td> <td></td> </tr> <tr> <td>Identify the context and situations in which removal of impaled objects is appropriate</td> <td></td> </tr> </table> <table border="1" style="width: 100%; border-collapse: collapse;"> <tr> <th style="text-align: center;">ALLERGIES/ANAPHYLAXIS(STICKS LAB)</th> <td></td> </tr> <tr> <td>Demonstrate ability to differentiate anaphylaxis from other kinds of allergic reactions</td> <td></td> </tr> <tr> <td>Prepares injection site</td> <td></td> </tr> <tr> <td>Properly demonstrate injections of epinephrine via an auto-injector</td> <td></td> </tr> <tr> <td>Dispose of injection devices appropriately</td> <td></td> </tr> </table>	MUSCULOSKLETAL SYSTEM		STABLE INJURIES		Assess distal CSM before beginning Treatment		Assess musculoskeletal injury and correctly identify stable injuries		Appropriately and effectively treat stable injuries		Re-assess distal CSM upon completion of treatment		UNSTABLE INJURIES		Assess distal CSM before beginning treatment		Assess musculoskeletal injury and correctly identify unstable injuries		Appropriately and effectively treat unstable extremity injuries		- Splint upper and lower limbs		Re-assess distal CSM upon completion of treatment		WILDERNESS RESCUE		PATIENT AND LITTLER CARRIES		Demonstrate ability to create a 'piggy back' carry system using webbing, rope or other materials		HYPOTHERMIA WRAP		Demonstrate ability to build a hypothermia wrap		WOUNDS AND BURNS		Use BSI technique, shows ability to expose bleeding area and apply well-aimed direct pressure		Demonstrates ability to create a pressure bandage and tourniquet		Participate in a wound cleaning lab		Identify the context and situations in which removal of impaled objects is appropriate		ALLERGIES/ANAPHYLAXIS(STICKS LAB)		Demonstrate ability to differentiate anaphylaxis from other kinds of allergic reactions		Prepares injection site		Properly demonstrate injections of epinephrine via an auto-injector		Dispose of injection devices appropriately	
PAS/BLS																																																																																																																											
SCENE																																																																																																																											
Recognize and safely manage scene dangers, including personal protective equipment																																																																																																																											
Establish # of patients																																																																																																																											
Determine MOI																																																																																																																											
PRIMARY ASSESSMENT																																																																																																																											
Rapidly assess Critical Systems Status (Circulatory, Respiratory, Neurologic)																																																																																																																											
BASIC LIFE SUPPORT																																																																																																																											
Demonstrates ability to assess the Critical Systems and determine need for interventions																																																																																																																											
Demonstrates rapid repositioning of patients with Critical Systems problems and potential spine injury																																																																																																																											
Demonstrates proficiency in CPR & FBAO to ILCOR standards																																																																																																																											
Demonstrate proficiency in PPV technique																																																																																																																											
Demonstrate proficiency in AED use																																																																																																																											
SECONDARY ASSESSMENT																																																																																																																											
Accurately completes physical exam for traumatic and non-traumatic patient																																																																																																																											
Demonstrate collection and recording of Vital Signs (P, R, S, C, T)																																																																																																																											
SAMPLE History																																																																																																																											
TREATMENT & SOAP FORMATTING																																																																																																																											
Create an appropriate problem list																																																																																																																											
Create an appropriate anticipated problem list																																																																																																																											
Create an appropriate treatment plan																																																																																																																											
Fill out a SOAP note																																																																																																																											
SPINE ASSESSMENT & Tx																																																																																																																											
ASSESSMENT																																																																																																																											
Verify MOI and consent if possible																																																																																																																											
Demonstrate ability to roll patient in a spine stable manner for assessment purposes																																																																																																																											
Demonstrate Spine Assessment Guidelines by evaluating:																																																																																																																											
- Patient's Mental status and reliability																																																																																																																											
- Any New Symptoms (column or cord)																																																																																																																											
- Spine Pain and/or tenderness (column)																																																																																																																											
- Motor/sensory exam (cord)																																																																																																																											
Document findings and describe appropriate management based on findings.																																																																																																																											
EXTRICATION/IMMOBILIZATION																																																																																																																											
Participate as a team member and lead a rescue team to properly move and package a potentially spine injured patient from various body positions																																																																																																																											
MUSCULOSKLETAL SYSTEM																																																																																																																											
STABLE INJURIES																																																																																																																											
Assess distal CSM before beginning Treatment																																																																																																																											
Assess musculoskeletal injury and correctly identify stable injuries																																																																																																																											
Appropriately and effectively treat stable injuries																																																																																																																											
Re-assess distal CSM upon completion of treatment																																																																																																																											
UNSTABLE INJURIES																																																																																																																											
Assess distal CSM before beginning treatment																																																																																																																											
Assess musculoskeletal injury and correctly identify unstable injuries																																																																																																																											
Appropriately and effectively treat unstable extremity injuries																																																																																																																											
- Splint upper and lower limbs																																																																																																																											
Re-assess distal CSM upon completion of treatment																																																																																																																											
WILDERNESS RESCUE																																																																																																																											
PATIENT AND LITTLER CARRIES																																																																																																																											
Demonstrate ability to create a 'piggy back' carry system using webbing, rope or other materials																																																																																																																											
HYPOTHERMIA WRAP																																																																																																																											
Demonstrate ability to build a hypothermia wrap																																																																																																																											
WOUNDS AND BURNS																																																																																																																											
Use BSI technique, shows ability to expose bleeding area and apply well-aimed direct pressure																																																																																																																											
Demonstrates ability to create a pressure bandage and tourniquet																																																																																																																											
Participate in a wound cleaning lab																																																																																																																											
Identify the context and situations in which removal of impaled objects is appropriate																																																																																																																											
ALLERGIES/ANAPHYLAXIS(STICKS LAB)																																																																																																																											
Demonstrate ability to differentiate anaphylaxis from other kinds of allergic reactions																																																																																																																											
Prepares injection site																																																																																																																											
Properly demonstrate injections of epinephrine via an auto-injector																																																																																																																											
Dispose of injection devices appropriately
